***Software Testing eliminate 'RISK' and brand company  
with better customer experience***

---

In the today's competitive market only the quality system/product endure firmly. Competitors, customers want more for software releases with new features. In the Software Development Life cycle (SDLC), the Testing plays an important role, which helps to improve the quality, reliability and performance of the system with all check what are all the functions software supposed to do and also check that software is not doing what not supposed to do.

Introduce testing in the early stage of development phases and it help to eliminate the Risks in the early stage and evade the bad customer experience and minimise companies operational expenses. In the testing, DQA team attempt to make the software defect free, can't say it as software is 100% error free but taking one step ahead to doing this and provide user friendliness high leads to brand company worldwide.
